

Course: ISO 45001:2018 IMPLEMENTATION COURSE
Duration: 3 days

AGO Certification has implemented an electronic certification process. On being assessed “competent” all delegates will receive an e-mail notification indicating that their certificate is available at a “vault” location which they can access immediately to obtain the certificate. The certificate will be available at this site for 5 years and can be accessed indefinitely by the delegate. Should a hardcopy certificate be required an additional fee of R145.00 excl. Vat per certificate will be levied. Please indicate your choice when making the booking with AGO Certification.

Course Objectives

The aim of the ISO 45001:2018 implementation course is to equip candidates with knowledge and skill to perform OH&S based internal program/system functions effectively and with confidence.

Course Outcomes

At the end of this course the delegate will be able to:

- Understand the terminology of the standard contained in the terms and definitions.
- Define a Health and Safety management system.
- Identify the general requirements needed for the successful implementation of a Health and Safety Management System.
- Discuss a Health and Safety Policy Statement.
- Identify the importance of Planning and the PDCA Cycle.
- Discuss the evaluation of a Management System.
- Identify the purpose of a Health and Safety audit.
- Explain Management Review and Improvement.
- Look at generating nonconformities.
- Explain the Implementation of a Management System.

Target Group

- Implementers of ISO management systems.
- Auditors-in-training, Employees.
- Management.

Pre-Requisites

ISO 45001 Awareness Course or work experience in the Occupational Health & Safety field.

Language

This course is presented in the English language.

Learning Material

Delegates will use the ISO 45001 Course manual and the ISO 45001 standard.

Course Requirements

It is a strong recommendation to bring a laptop with to the course to use during training.

Certification & Assignment

The course includes a practical assessment and if successful, you will be issued with a Certificate of Successful Completion.

Occupational Health & Safety has become an ever increasing aspect which the management of a responsible business needs to manage effectively.

With increasing newspaper and television coverage of incidents that have occurred, it has become a priority to pro-actively look at saving lives and improving the quality of our Health and Safety management systems in organizations.

Poor statistics lead to a poor organizational image, lower production, increased costs, lower employee morale and can even lead to being removed from the JSE as a listed company.

People are important resources which we cannot operate without – we need to provide a working environment that is free from harm, illnesses and diseases to maintain the current safety and health status of these employees.

The implementation of an OH&S management system is a strategic and operational decision for an organisation. The standard highlights certain success factors which depend largely on leadership commitment and participation from all levels and functions of the organisation
